

CUTTING-OUT HEADS

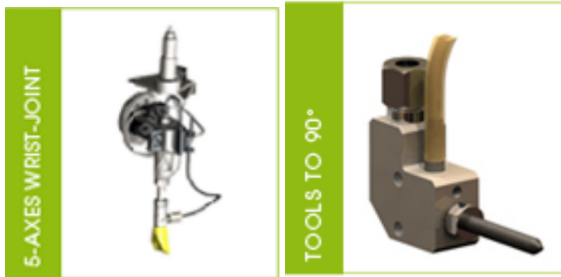

We resell the market's best water-jet cutting heads according to application: Flow, Jet Edge and KMT. In case of specific requirements, we adapt the market's standard parts or design and provide specific heads.

Examples

- **5-axes wrist-joint** with abrasive water jet cutting tool mounted on HSK63 cone-type tool changer.

Integration of an angular indexation function of the tool, of specific anti-bouncing hawk-type type accessories, of high-pressure and vacuum sensors. The HSK63 tool-changer allows the mounting of other tools such as probes and calibration bars instead of the cutting tool.

- To comply with space or access requirements, we have developed various **more compact** or **right-angled tools**.
