The workshop's new design: more professional, even cleaner, safer...

A brand-new floor, walls repainted in Aquarèse colours ... The atmosphere in the erecting shop has been modernized!

3 objectives to get more professional:

- a cleaner shop, with renovated floors and an integrated dust-free room.
- a safer shop, with the integration of automatic sectional doors and floor markings to delimit the "risk areas".
- a real confidentiality for our customers' projects, with the installation of opaque out-of-sight sections.

Do our latest technological innovations really lead to new possibilities?

Aquarèse's latest innovations do offer our customers completely new possibilities. The relevant question is: what's in it for me with these tools?

- 7 000 bar and 9 000 bar to increase the efficiency of **autofrettage** with a compact amplifier
- l'**AquaLance**, Aquarèse's unique UHP rotary head, with its distinctive reliability (up to 1000 hours without maintenance) and its operating ranges (pressure / flow).
- l'**AquaStrip**, the UHP multijet head which can be used with or without abrasive additives and introduces revolutionary surface treatments.

Gains are significant in many cases and we shall be with you to turn your idea into an efficient, reliable and profitable production installation.
